

## Highlighting some misconceptions from the Model Rail Review

1. Dingo Servo Mounts are supplied **WITHOUT** servo motors. These are sold separately and are priced according to customer preferences. Alternatively, some users prefer to source their own motors.
2. References to “No Soldering” are misleading as there will need to be soldering of wires to the microswitches for frog switching or indication on panels, lights, etc.
3. We do not recommend the use of a servo tester as a means of operating the points. These are used primarily for centring the servos during construction.
4. There are a variety of control systems for the operation of servos – We supply a single and a twin board for this purpose, but other manufacturers also supply boards which will control a varied amount of servos.
5. Please read the detailed descriptions on our website before ordering to make sure you have everything you require.
6. Please refer to the “Downloads Page” for pdf instructions on all our units.  
<http://dingoservo.co.uk/downloads.html>
7. The “Video Links” page has all the descriptive videos as well as many assembly videos to help you get the most out of our products.  
<http://dingoservo.co.uk/video-links.html>

Finally it was never intended to mislead folk with this review, but unfortunately I did not get to see it pre press and some misunderstandings crept in.

Thank you for taking the time to read this article and I hope you will become a regular Dingo User.

With Kind Regards

**Dave**
